

AltiGen Phone Systems

Analog Extension Support

Analog Extension Support

Analog Extensions offer businesses the opportunity to save money with high feature/function, low cost, easy to use communications devices. In today's world of digital and IP communications there is still a need to support analog devices like **modems** and **fax machines**. These can be supported and managed on an AltiServ system and fax and modem calls can then be tracked in the system CDR reporting. Supporting Fax and Modem lines with the telephone system allows businesses to eliminate the cost of phone lines dedicated to support these devices.

Additional savings can be achieved because analog extensions can utilize existing telephone wiring saving system installation costs. In addition to the support of modems and fax machines, AltiServ supports customized **AltiTouch and AltiTouch Plus analog telephones**. AltiTouch telephones are specifically engineered for the AltiServ office IP-PBX to enable simple access to the advanced functions of an AltiGen IP-PBX telephone system. With the versatility of the AltiServ IP-PBX system AltiGen offers **support of a wide variety of industry standard analog telephones**. Again, offering high quality business communications at affordable prices. You can maximize your investment because there is no need to sacrifice performance for affordability.

Make calling easy with interactive screens. AltiTouch phones are feature rich, intuitive telephones with large displays for display of caller information and feature buttons. Now powerful features formerly only available on expensive digital telephone sets are now available on cost effective analog AltiTouch telephones. AltiTouch telephones come pre-programmed with 30 AltiServ features and are a full duplex speaker telephone.
